Strength that shines over you with MIVAN technology

- MIVAN Formwork Technology (MFE) is a revolutionary aluminium formwork construction system.
- MFE is successfully used in 16 countries and developed for over 30 years, for forming cast in place reinforced concrete building structures.
- Using this unique system, all walls, floor slabs, columns, beams, stairs, balconies, together with door and window openings are cast in place in a single site based operation.
- The resulting building structure is very strong, accurate in dimensions and tolerances, with a high quality of finished concrete surface.
- The edge MFE offers over conventional construction methods is that it enables timely delivery of apartments with consistent quality even in a market where skilled labour is becoming scarce.
- The use of this revolutionary construction technology enables Navin's to live up to, if not enhance it's standards of excellence, consistency and timeliness.
- The main characteristic of the MFE Formwork Technology is that it makes use of concrete as the principal building material.
- Concrete in MFE Formwork Technology also brings additional benefits in terms of it's build, quality and strength.
- Other salient features that make MFE Formwork Technology a brand leader is it's resistance to earthquake tremors; it's resistance to fire, rot and vermin attack; it's low noise transmission with good thermal capacity and it's proven durability, giving long life, with little maintenance.

Opulent clubhouse that conquers the sky
